EDU 7701 Outline

7701 focuses on lesson designs and instructional strategies that incorporate a web2.0 perspective. Lessons are viewed as the work of teachers and students. The traditional lesson design emphasizes the role of student as respondents to teacher solicitations. Digital tools may be used to strengthen inquiry, curiosity, and student academic interests, thereby engaging students as agents of intellectual work. Similarly, teachers may engage in web2.0 style work, collaborating and publicly assessing their work.
